

A Space Saving
Door Design with
Strength, Safety
and Style.

The Side Slide Roller Closure

Door Moves
Around the
Outside of
the Elevator
Car Wall

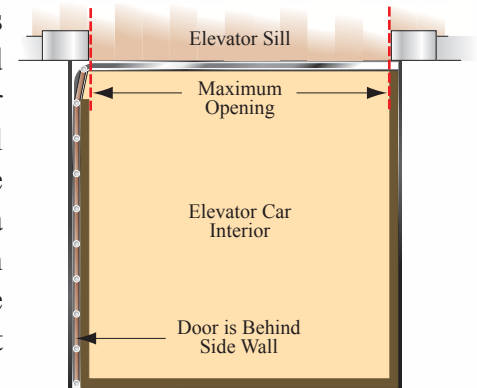

Designed for home elevators, the Side Slide Roller Closure wraps around the outside of your elevator car to leave a larger opening than is possible with traditional gates. Perfect for narrow platforms and tight spaces, the solid wood construction also provides a stronger, safer and more attractive option for your home.

Move Outside the Box

The Side Slide Roller Closure is an innovative door designed to maximize space on smaller home elevators.

Our unique design turns a corner as it opens and wraps around the side wall of the elevator car. You're left with the maximum clear opening possible on narrow platforms, and the door is out of the way and protected from damage while entering and leaving the elevator.

Even if space isn't an issue, the Side Slide Roller Closure is one of the safest and strongest home elevator doors available. It's made with 3/4" solid wood panels, and guided along the bottom every 4 1/2 inches for maximum strength. It closes to cover the full opening of the car and sits just 5/8" from the edge of your platform - so there isn't a dangerous opening to worry about. Fitted with hinge tubes to prevent pinching, the Side Slide also features a built-in safety edge that reverses the direction of the door.

Appearance is important for home elevators, and we offer a choice of solid, natural woods to compliment any décor. Genuine Maple, Mahogany, Birch, Oak or Cherry panels provide quality and the touch of class you would expect in finer homes.

And despite its many features, installation of the Side Slide Roller Closure is a cinch. The operator is shipped as a single assemblage and runs on a conventional 115 volt circuit so that no additional power is required. The reversing mechanism is built into the drive system and requires no field wiring.

- Unique, corner-turning design allows wider opening than traditional gate
- Maximizes space on narrow platforms and smaller home elevators
- 3/4" solid wood panels are stronger than most residential products
- Covers full car opening and sits just 5/8" from edge of platform
- Built-in safety edge reverses direction of door
- Shipped as a single assemblage and runs on conventional circuit
- Available in a wide selection of natural woods for the perfect aesthetic fit
